[root@f3aa5f8004a9 mydir]# man useradd > useradd-man.txt
[root@f3aa5f8004a9 mydir]# grep "password" useradd-man.txt
        The number of days after a password expires until the account is permanently disabled. A value of 0 disables the
        account as soon as the password has expired, and a value of -1 disables the feature.
        Example: -K PASS_MAX_DAYS=-1 can be used when creating system account to turn off password aging, even though system
        account has no password at all. Multiple -K options can be specified, e.g.: -K UID_MIN=100  -K UID_MAX=499
    -p, --password PASSWORD
        The encrypted password, as returned by crypt(3). The default is to disable the password.
        Note: This option is not recommended because the password (or encrypted password) will be visible by users listing the
        You should make sure the password respects the system's password policy.
        The number of days after a password has expired before the account will be disabled.
        the same name, same password, and same GID).
        The maximum number of days a password may be used. If the password is older than this, a password change will be
        The minimum number of days allowed between password changes. Any password changes attempted sooner than this will be
        The number of days warning given before a password expires. A zero means warning is given only upon the day of
        Shadow password suite configuration.
```

```
[root@f3aa5f8004a9 mydir]# diff /var/log/anaconda/syslog ~/mydir/securecopy.txt
